CELL CONDITIONER

with Entrone

CELL CONDITIONER is a primary injection fluid that washes the capillary bed, clears and expands the small blood vessels of the circulatory system, prepares the soft tissue cells for better reception of the main arterial treatment and improves drainage.

CELL CONDITIONER contains a small amount of formaldehyde and other preservative materials so that it will not waterlog the tissues.

It is of a high drainage nature to aid in displacing blood and body liquids from the blood vascular system.

In order to achieve preservation, the main chemical preservative solution must contact all of the tissue areas of the body. If it is unable to do this because of obstruction in the circulatory system, then the arterial fluid cannot be expected to achieve its intended purpose of preserving such areas.

CELL CONDITIONER aids in this function by clearing the way for the main arterial treatment. When used according to the following directions, CELL CONDITIONER will greatly improve the results on every embalming operation.

DIRECTIONS

Dilute at the rate of 8 oz. with enough water at room temperature to make one-half gallon. Addition of 2-3 oz. of pH-A will enhance the effectiveness of CELL CONDITIONER. Inject solution slowly, without drainage if possible. Allow 10 to 15 minutes for maximum reaction, then initiate drainage and proceed with normal embalming procedures.

BEFORE USING, READ SAFETY DATA SHEET.
FOR PROFESSIONAL EMBALMING USE ONLY.

6.3. Methods and material for containment and cleaning up

Methods for cleaning up	:	Keep upwind of the spilled material and isolate exposure . Wear proper protective equipment. Contain large spillage with sand or earth. Contain any spills with dikes or absorbents to prevent migration and entry into sewers or streams. Gather the product and place it in a spare container that has been suitably labelled. Consult the appropriate authorities about waste disposal. Small spills may be flushed to a sanitary sewer with copious amounts of water, if in accordance with local, state or national legislation. Eliminate all sources of ignition, avoid sparks, flames and do not smoke in risk area. Ensure all national and local regulations are observed. Soak up spills with inert solids, such as clay or diatomaceous earth as soon as possible. Collect spillage. Store away from other materials.
